Project Title: Restaurant Website

A restaurant website that showcases Indian delicacies along with its specialities. The navigation bar would navigate to the following pages:

- **Home** page displaying the best sellers and platters available. Also, information about the restaurant would be provided ranging from its history to services available. The home page would also provide the contact information along with the opening hours and social media handles.
- **Menu** page displaying the wide range of dishes available ranging from starters to entrees to desserts. Separate sections of the page would include vegetarian and non vegetarian options.
- **Party** page displaying a myriad of options to choose from for various events taking place i.e., if the customer wants a half/full tray for a specific dish.
- **Staff** page displaying the staff involved behind the scenes and their speciality dishes.
- **Order** page displaying the various means of ordering from the restaurant such as pickup, drop of service and full service.
- **Gallery** page displaying the items on menu in an aesthetic fashion to attract customers.
- **Reservation** page displaying locations that the customer would want to reserve a table in along with the timings preferred. Further enhancements could be including floor plans i.e., the preference of tables making reservations a seamless experience.
- An '**Order Now**' button to place orders via delivery partners.
